Claim Objections

1. Claim 18 is objected to because of the following informalities: In line 4, "a diseased heart" should read as "the diseased heart" due to the disclosure of "a diseased heart" in line 3 of the claim. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 18 and 32-35 are rejected under 35 U.S.C. 102(b) as being anticipated by Alferness ('343).

Alferness discloses a cardiac reinforcement device and further discloses accessing the diseased heart (See Column 2, lines 48-52; and Column 3, lines 64-67); selecting a device sized to be placed on the diseased heart, including selecting a device of electrical permeability sufficient to apply trans-chest defibrillation of the heart (See Column 3, lines 18-19; and Column 4, lines 12-22); placing the device on the heart, the device comprising biocompatible material configured to engage a surface of the heart to constrain circumferential expansion of the heart (See Column 3, lines 27-32); securing the device on the heart (See Column 4, lines 31-33); the device is secured to the heart with sutures (See Column 4, lines 33-40); adjusting the device to snugly conform to the

Art Unit: 3736

external geometry of the heart (See Column 4, lines 37-38); and the biomedical material is substantially non-elastic material (See Column 3, lines 27-28).

Even though Alferness ('343) fails to explicitly disclose the ability to apply trans-chest defibrillation when the jacket is in place, Alferness ('343) discloses the use of the same materials for the cardiac jacket, namely polypropylene or polyester mesh, as in the current application. Therefore, based on the use of the same materials, one of ordinary skill in the art would be able to determine that the jacket of Alferness ('343) would be able to allow the application of trans-chest defibrillation when the jacket is placed on the heart.
